

ABSTRACT

The present invention relates to an information processing apparatus and method, a program, and a recording medium that facilitate, for example, identification of information recorded on a recording medium. In a disc formatting process 211, a disc-metadata-file creating unit 181 creates a disc-metadata file including various types of label information, using a PROAV-ID copying unit 192 and a representative-image setting unit 194. Furthermore, in a disc-metadata updating process 212, a disc-metadata-file managing unit 182 updates the disc-metadata file, for example, using the representative-image setting unit 194. A disc-metadata-file recording controller 183 executes a process of comparing PROAV IDs using a PROAV-ID comparing unit 193, and records the disc-metadata file on a disc 132 when the PROAV IDs match. The present invention can be applied to an editing apparatus.
